

Assignment 2: EC2 Instance & Live Docker Website Deployment

Student Name: Chakshu Sharma

RTU Roll Number: 23EACAD030

Step 1: EC2 Instance Provisioning

An EC2 virtual machine instance named *chakshu-docker* was successfully launched and configured in the AWS Management Console. The deployment uses an existing security group with standard HTTP protocols enabled to handle public web traffic. The server is fully active and assigned a static public IPv4 address of 18.207.154.244.

Fig 1: Running EC2 Instance Details

Step 2: Docker Containers Execution

Inside the server terminal using EC2 Instance Connect, the application services were verified using Docker Compose. The frontend container is running on port 3000 and the backend is running on port 8800.

The screenshot shows a web browser window with the AWS Management Console URL. The terminal output displays the command `sudo docker-compose ps` and its results. A warning message indicates that the `version` attribute in the `docker-compose.yml` file is obsolete. The output lists two containers: `fruits-backend` and `fruits-frontend`, both running on the `fruits-backend` and `fruits-frontend` images respectively. The `fruits-backend` container is mapped to port 8800, and the `fruits-frontend` container is mapped to port 3000. The terminal also shows the public and private IP addresses of the EC2 instance.

```
[ec2-user@ip-172-31-23-28 fruits]$ sudo docker-compose ps
WARN[0000] /home/ec2-user/fruits/docker-compose.yml: the attribute `version` is obsolete, it will be ignored, please remove it to avoid potential confusion
NAME                IMAGE             COMMAND                  SERVICE    CREATED         STATUS         PORTS
fruits-backend      fruits-backend    "docker-entrypoint.s..." backend    11 minutes ago  Up 11 minutes  0.0.0.0:8800->8800/tcp, [::]:8800->8800/tcp
fruits-frontend     fruits-frontend   "docker-entrypoint.s..." frontend  11 minutes ago  Up 11 minutes  0.0.0.0:3000->3000/tcp, [::]:3000->3000/tcp, 5173/tcp
[ec2-user@ip-172-31-23-28 fruits]$

PublicIPs: 18.207.154.244 PrivateIPs: 172.31.23.28

Fig 2: Docker Containers Status in Terminal

Step 3: Live Website Verification

The deployed web application ("Fruitables") is globally live and resolving perfectly over the internet at the target URL 18.207.154.244:3000 inside the web browser

Fig 3: Live website open in browser via Public IP
